Euclid Non Shrink Grout contains only natural aggregate and an expansive cementitious binder. It is extremely flowable. When cured, it appears similar to concrete in appearance. Questions? Contact us 50 lb (22.7 kg) yields 0.45 ft³ (0.013 m³) of fluid grout when mixed with 1.2 gal (4.6 L) of water. Note: The contractor and engineer are encouraged to consult and review the Euclid Chemical bulletin: "Cementitious Grout Application Guide". The document offers instructions detailing the general installation of Euclid Chemical manufactured cement-based grout products. Important: If the contractor is not familiar with standard grout placement techniques, a pre-job meeting is suggested to review the project details unique to the particular job. Contact your local Euclid Chemical representative for additional information. Mixing Consistency Fluid Flowable Plastic Estimated Water Content, 50 lb bag* 1.1 to 1.2 gal (4.2 to 4.6 L) 0.9 to 1.0 gal (3.4 to 3.8 L) 0.8 to 0.9 gal (3.0 to 3.4 L) * Do not add water in an amount that will cause bleeding or segregation. More or less water may be required to achieve a 25 second flow or the desired placing consistency, depending on temperature and other variables. Do not add sand or cement to the grout since this action will change its precision grouting characteristics. When NS GROUT will be placed at a depth over 5" (12.7 cm), up to 25 lb (11.3 kg) of pea gravel per 50 lb (22.7 kg) bag [27.5 lb (12.5 kg) of pea gravel per 55 lb (25 kg) bag] must be added to each bag of grout. Note that the water demand to achieve a certain flow level of the grout will change. Once the correct amount of water has been added to a clean mixing pail, mix the grout with a high speed drill and mixing paddle for 3 minutes. Quickly transport the grout to the placement area. Application: See the "Cementitious Grout Application Guide" for installation means and methods. Euclid Chemical YUMPU automatically turns print PDFs into web optimized ePapers that Google loves.
